SUMMARY

Full-stack product developer building software that has to hold up in real workflows, not just demos. Recent work spans web product platforms, content-rich company platforms, a Windows manufacturing app, and a Flutter + Rust utility suite. I work best where product clarity, interface structure, and implementation quality need to reinforce one another.

CORE SKILLS

Full-stack web development (primary): React, Node.js, Express, MySQL, PostgreSQL

ADDITIONAL SKILLS

Web dependencies: Next.js, TypeScript, JavaScript, Vite, Tailwind CSS, Framer Motion, Material UI, React Router, TanStack Router, Prisma, Sequelize, REST APIs, auth, validation, uploads

Desktop development: .NET 8, C#, WinUI 3, Win2D, AssimpNet, MVVM, iText 7, screenshot and document workflows

Cross-platform and local-first: Flutter, Dart, Rust, Flutter Rust Bridge, FFI, on-device processing, encrypted storage, FFmpeg, multi-platform release

Data and delivery tooling: SQLite, Git, Docker, GitHub Actions, CI/CD pipelines, build and release workflow support

EXPERIENCE

Software Engineer — Product, Web & Desktop

Dec 2024 – Dec 2025

Printalytix

Bengaluru, India

- Worked across customer-facing and internal product surfaces, from upload-heavy web flows to operations-oriented tooling.
- Built and evolved **MIND** as a .NET 8 Windows desktop app for 3D model inspection, manufacturing guidance, screenshot capture, and report generation.
- Delivered React and Node-based systems with protected workflows, validation, uploads, and maintainable product structure.
- Contributed across frontend, backend, and workflow design instead of staying in a single layer of the stack.

Volunteer — Full-Stack Development

Oct 2023 – Jan 2024

Old Dominion University

Norfolk, VA, USA

- Built a university threads platform with role-based access, discussion flows, and real-time messaging.
- Delivered an examination management system covering assessment workflows, submissions, and administrative coordination.
- Worked on backend queries, caching, and application structure to keep the platform responsive as features expanded.

SELECTED PROJECTS

Pettige | Flutter, Dart, Rust, SQLite, FFmpeg

- Privacy-first, cross-platform utility suite with **30+ tools** across PDF, image, audio, video, QR, OCR, encrypted storage, and developer workflows.
- Built it around dedicated PDF Studio, Image Studio, Audio Studio, Video Studio, and Dev Workbench flows so the product stays navigable as the tool surface grows.
- Designed a split architecture where Flutter handles routing and the product shell while Rust performs heavy local processing with native-style performance.
- Structured SQLite-backed storage around on-device persistence, resumable uploads, and AES-256-GCM file protection.

Open Solar Toolkit | React 19, TypeScript, Tailwind, DnD Kit, Recharts

- Solar operations product covering **7 workstreams** across administration, project management, sales, supply chain, installation, maintenance, and reporting.
- Built the UI as a set of specialised operational surfaces instead of one generic admin panel.
- Treated it as a product workspace rather than a static frontend, with backend hooks, tests, linting, and structural validation in place.

MIND Manufacturing Intelligence | .NET 8, C#, WinUI 3, Win2D, AssimpNet

- Windows desktop workflow that brings model viewing, inspection, manufacturing guidance, screenshots, and reporting into one application.
- Worked across views, view models, rendering services, assets, and structured outputs rather than treating it as only a rendering demo.
- Shows range beyond web work into workflow-heavy internal software where operator clarity and correctness matter.

Potential Client Website | Next.js 14, React 18, TypeScript, Tailwind

- Content-rich company platform with reusable data models for technologies, concepts, awards, and knowledge content.
- Structured the site so technical credibility, educational content, and future lead-generation flows can live in one maintainable system.
- Balanced technical credibility, educational content, and business inquiry flow in the same product surface.

Resolute Solutions Site | React 19, Vite, Tailwind, EmailJS, PWA

- Live multi-vertical business site covering **4 service lines** with routed inquiry flows and structured catalogue content.
- Carried the work through to production delivery instead of stopping at a local prototype.
- Demonstrates multi-theme component reuse and content structuring in a real client-facing setting.

Printalytix Platform | React 19, Redux Toolkit, Node.js, Express, Prisma

- Full-stack workflow product for customer intake, uploads, protected operations, and ongoing internal follow-through.
- Worked across frontend, backend, and data layers so validation, access rules, and operational tooling behaved like one system.
- Helped modernise the frontend workflow while keeping richer form, table, and upload surfaces intact.

University Threads Platform | React, Material UI, Express, Sequelize, MySQL

- Earlier multi-user collaboration system that still shows the foundations of my full-stack approach.
- Built around authentication, validation, rate limiting, logging, and role-aware behaviour instead of static page rendering alone.
- Useful as a portfolio piece because it demonstrates the shared-system thinking beneath later product work.

EDUCATION

Bachelor of Computer Applications (BCA) – Computer Science

Bengaluru North University

Aug 2018 – Aug 2024

Bengaluru, India

- 6 years: extended due to COVID-related semester delays and a 1-year gap.
- Built a foundation in DBMS, web development, data structures, and algorithms.
- Completed a final-year project centred on full-stack web development with MySQL.
